

Port Hedland Dust Management Taskforce Report to Government

Public Submission

From: B Raeburn

Date: 6 October 2017

Document: Email with Letter (below) (6 October 2017); Email with video (5 October 2017); 2 Emails with pictures (5 October 2017)

To whom, that might! be concerned

Dusty Port Hedland, well we have been told for years that the dust comes form out in the desert!

It blows in from the south east right over South Hedland and lands on the west end of Port Hedland.

They don't mention that the dust actually gets transported from the desert into town by trains, and then the dust is generated by the transfer of the product from the train to the ship.

The dust is killing our town and not to mention the employees in the mining companies. These company's should be made to stop there dust infecting the town site.

Why should the town and its residences be hindered by the mining company's dust? They should be made to keep the environment clean and the air free of dust.

Why is the government so concerned on this side of the fence? They should be worried about where the dust comes from and do something about it!

Big business wagging the tail of the government.

Cough Cough

Regards
